

Fuse Quarterly Research Meeting Reuniting Planning and Health

9.30am-3.45pm
Thursday 7 April 2016

The Core, Science Central, Bath Lane
Newcastle upon Tyne
NE4 5TF

With a long history of working together and an urgent need to address the wider determinants of health, how can planning and health be reunited in the new public health landscape?

The built environment is an important wider determinant of health and therefore planning is a key partner in addressing public health issues. But to what extent are planning and health partnerships delivering real change on the ground? What more needs to happen to ensure that planning is actively involved in public health decision making and implementation? Is there an evidence base for such interventions? What is the role for Universities and Local Authorities?

The morning part of this meeting will consider how public health can contribute to urban planning and the delivery of healthy sustainable communities in the future. Key note speakers from government, architecture and planning and academia will present international and local studies and reflect on the latest evidence.

After a free lunch, four interactive workshops in the afternoon will let you experience new tools and interdisciplinary approaches for reuniting planning and health, including a theatre-based workshop that explores different perceptions of how to have impact on health. If you wish to attend the workshops, please select two preferences when registering.

This Quarterly Research Meeting is part of an ESRC funded interdisciplinary seminar series that investigates the implementation gaps in evidence governance and knowledge for reuniting planning and health.

The event will be an opportunity for those working in public health, academia, planning and architecture to discuss and consider how they can work more effectively together.

Keynote speakers:

- **Laurence Carmichael: Director of the WHO Collaborating Centre for Healthy Urban Environments, UWE, Bristol**
National and local initiatives for closer working between planning and health
- **Etive Currie, Development & Regeneration Services, Glasgow City Council**
How urban planning can have a positive impact on health, well-being and quality of life
- **Ashley Cooper: Professor of Physical Activity and Public Health, University of Bristol Centre**
How the physical environment influences children's behaviour
- **Lee Parry-Williams, Senior Public Health Practitioner, Public Health Wales**
Examples of Health Impact Assessments (HIAs) in Wales
- **Lesley Palmer: Chief Architect for the Dementia Services Development Centre, University of Stirling**
Dementia-friendly design principles
- **Gary Young: Partner with Farrells (international architect & planning practice)**
NHS Healthy New Towns prospectus and the Bicester case study

Programme for Fuse QRM, 7 April: “Reuniting Planning and Health”

The Core, Science Central,
Bath Lane
Newcastle upon Tyne
